

Project: Heat Loss prevention

North Seaton Community Centre

North Seaton Community Centre was built in the 1970s of concrete single sections. With no insulation fitted, this makes the building very cold in winter. The proposal is to attach single wall insulation to the exterior of building like the diagram and picture shown This is designed to prevent heat loss of up to 30%. Which in turn will reduce our heating costs and our carbon footprint.

Tenders were sorted for the work all company's sent out surveyor's engineers.

Company 1. [REDACTED]
External Wall

Installers.	£19,000
Company 2. [REDACTED]	£26,400
Company 3. [REDACTED]	£36,164.80

Current funding available

County Councilors small schemes money	£ 15,000
